Figure 2. Diagram showing core processes and other processes and how they interact.

*** MAIN PROCESSES:**

- Indexing & Metadata Capture (Cataloguing)
 - Tagging of all data objects, documents, and files with a unique index to allow management using electronic computerised databases.
 - Extracting additional metadata
 - Gap Analysis - Data Coverage Mapping to identify gaps in the data record.
- Scanning - Digitalisation of hardcopy document data to digital document format
- Vectorisation of Analogue representations of data and Information to structured vector machine processable format.
 - Logs
 - Auxiliary Well Information (including Lithology)
 - Well header Information.
 - Maps
 - Seismic
 - Tabular Data
- Well Log Curve Data Compositing
